ABANG OBED

Cybersecurity Researcher | Filmmaker

Abuja, Nigeria | obx@wearehackerone.com | github.com/d3vobed | linkedin.com/in/obx03 | obx03.tech

PROFILE SUMMARY

I am a curious person who enjoys building things and understanding how they work. That curiosity led me into cybersecurity, where I work across offensive security, reverse engineering, malware and application security research. I spend most of my time exploring how systems behave, how vulnerabilities show up and how attacks work under the surface, then turning what I learn into tools and research people can actually use. Outside security I write and make films, driven by the same habit of asking questions and telling stories that matter.

CORE SKILLS

Core strengths: Security Research, Windows Internals, VAPT, Software Development, Creative Problem Solving

Security research & offensive security: penetration testing, vulnerability assessment, reverse engineering, malware analysis, web / API / mobile security testing, authentication and authorization testing, business logic flaws, Active Directory exploitation, thick client enumeration, Windows internals (Win32 API, Event Tracing for Windows), EDR telemetry research

Networks & operations: SIEM monitoring, incident investigation, network security, MikroTik, Cisco, network segmentation, access management, Active Directory, remote access, GIS and Mission Control Center support

Software development: Python, Node.js, NestJS, PostgreSQL, MongoDB, Redis, React, REST APIs, CI/CD pipelines, AWS CloudFormation, Git

WORK EXPERIENCE

Lead Security Engineer (Contract)

Kynettic | Remote (Lagos, Nigeria) | July 2026 - Present

- Performed authorized penetration testing across production web, mobile and API infrastructure, identifying critical weaknesses in sensitive financial data exposure, user enumeration and access control.
- Assessed P2P trading and DeFi transaction workflows, uncovering business logic flaws in payment workflows, weak cryptographic entropy in biometric checks, information disclosure and other transaction security weaknesses.
- Improved platform security through risk based vulnerability reporting, technical impact analysis and prioritized remediation recommendations, helping engineering teams close security gaps and strengthen financial transaction integrity.

Creative Director (Self-employed)

Icon Digital Edge | Federal Capital Territory, Nigeria (On-site) | September 2026 - Present

- Carried key creative and technical responsibility across the SFH Access production pipeline as First Assistant Camera (1st AC) and Editor.
- Wrote scripts for short skits, talking head videos and a podcast session, and handled art direction and visual effects.

Security Consultant (Contract)

Gigafro | Lagos, Nigeria (Hybrid) | January 2026 - August 2026

- Evaluated platform security across real time geolocation, gig dispatch, worker ranking and network based distribution systems.
- Performed vulnerability assessments of the Gigafro marketplace across web, mobile and backend infrastructure, covering authentication, authorization, API endpoints, data handling and business logic.

System Network Administrator (Internship)

National Emergency Management Agency (NEMA) | Utako, Federal Capital Territory, Nigeria (On-site) | June 2025 - Present

- Administered enterprise network infrastructure including fibre optic connectivity, MikroTik and Cisco equipment, network configuration, security monitoring, troubleshooting and access management for reliable interdepartmental connectivity.
- Supported emergency response intelligence and Mission Control Center operations through GIS based geolocation, triangulation, distress signal tracking and monitoring system setups, contributing to incident coordination and search and rescue response planning.
- Deployed and managed Active Directory services, supported secure remote access and user administration, and contributed to an interdepartmental digital file management system with document scanning, indexing and search.

Staff Backend Developer (Contract)

Myphlexit | London Area, United Kingdom (Remote) | April 2025 - July 2025

- Engineered backend services and REST APIs using NestJS and PostgreSQL, powering user authentication, ticket management and core application workflows.
- Improved API responsiveness and data retrieval efficiency through server side pagination, optimized database queries and client side caching strategies.
- Designed the MongoDB data access architecture and implemented CI/CD pipelines with AWS CloudFormation to streamline deployment workflows and improve infrastructure consistency.

PROJECTS

Video Storybook

February 2025 - Present | Stack: React Native, ML Kit, MiDaS

- AI video editing application that turns still images into wide angled shots, event continuity and dynamic motion using MiDaS, TensorFlow, ControlNet, Skia and ML Kit, giving filmmakers a storyboard preview.

Azure Stack USSD Service

December 2024 - January 2025 | Stack: USSD, ASP.NET Web API, Azure Stack Hub

- Scalable USSD service using Azure Stack Hub for enterprise mobile access to USSD services on network, built with Africa's Talking.

PUBLICATIONS

[1] Abang, O. (2026). Design and Implementation of a Secure Telemetry-Driven Code Mutation Framework for Controlled Endpoint Detection and Response Resilience Testing in Windows Environments. B.Tech Thesis, Federal University of Technology, Minna.
[2] Abang, O. and Seun Ajayi (2025). Conversational Artificial Intelligence for Dementia Care: Emotion-Aware Dialogue Design and System Architecture. Technical Report, National Centre for Artificial Intelligence and Robotics (NCAIR), Abuja.

EDUCATION & CERTIFICATIONS

B.Tech in Cyber Security Science

Federal University of Technology, Minna | Minna, Nigeria | 2021 - 2026

Coursework and thesis work focused on operating systems, Windows internals, endpoint security and telemetry research, building custom Windows tooling in Python to study process execution, code mutation and EDR telemetry.

Certified Penetration Testing Specialist (CPTS)

HackTheBox Academy, Credential ID HTBCERT-2508B8ABE8 | February 2024

Active Directory exploitation, penetration testing, vulnerability assessment, thick client enumeration, reverse engineering, security reporting and documentation.

HONORS & AWARDS

- NCAIR Hackathon Winner (September 2025), $1,000 grand prize for a conversational AI companion for dementia care.
- Gemini Hackathon Special Recognition (February 2026) for a LiDAR spatial assistant that helps blind users navigate rooms.
- CodeSandbox Security Credit (2024), credited on GitHub Security Advisory GHSA-5jw5-g7mr-h26r for a high severity report.
- X (Twitter) Security Report (2023), improper access control classified critical on HackerOne with a $2K bounty.
- CyberSafe HQ HackTheBox CTF, 1st place.

VOLUNTEERING

- Security Feeds (YouTube), March 2024 to present. Security reviews and research videos that help beginners see cybersecurity as a career path, plus writeups and findings from personal research.
- NACSSS, FUT Minna, October 2022 to October 2024. Designed awareness graphics for Cybersecurity Awareness Month and mapped the design concepts used in presentations and demos.

LANGUAGES

English (native), Italian (elementary)
